REPORT

RELATING TO THE REGISTRATION OF

BIRTHS, MARRIAGES AND DEATHS

IN THE

PROVINCE OF ONTARIO

FOR THE

YEAR ENDING 31st DECEMBER,

1892.

PRINTED BY ORDER OF THE LEGISLATIVE ASSEMBLY

TORONTO:

WARWICK BROS. & RUTTER, PRINTERS, &C., 68 AND 70 FRONT STREET WEST.
1894.

OFFICE OF THE REGISTRAR-GENERAL FOR ONTARIO,

TORONTO, January 1st, 1894.

*To the Honorable George Airey Kirkpatrick, LL.D., Q.C.,
Lieutenant-Governor of the Province of Ontario.*

MAY IT PLEASE YOUR HONOR :

In compliance with the Statute in that behalf, the undersigned respectfully presents to Your Honor the Annual Report of Births, Marriages and Deaths for the year ending 31st December, 1892.

Respectfully submitted,

R. HARCOURT.

Registrar General.

OFFICE OF REGISTRAR-GENERAL,
TORONTO, January 1st, 1894.

TO THE HON. RICHARD HARCOURT,
Registrar-General of Ontario.

SIR,—I have the honor to submit to you the following report *re* the births, marriages and deaths registered in Ontario during the year 1892 :

Population.

The population for the year 1892, taken as the basis of calculation for the mortality and other rates contained in this report, is that of the Dominion census of 1891, to which a percentage of 1.11 per cent. of increase has been added for every registry division. This hypothetical basis has been established by taking the difference between the total number of deaths and of births returned during the year. This is probably slightly below the actual increase, as the returns of various division registrars undoubtedly prove an imperfect registration of births. While it is 4-10 of one per cent. below the average increase for England and Wales, yet as has been referred to in past annual reports, the returns for the larger cities, fairly complete, show a less birth-rate than the urban population of England. Based, therefore, on this hypothetical rate of increase the population of the various counties in 1892 is as found in Table 1 of this report. In the same table is found the total number of registrations returned by division registrars during the year 1892. The notable fact is therein illustrated that the totals for births, marriages and deaths together is less by 723 than the returns for the previous year, 1891.

By the following table the differences are at once seen :

—	Births.	Marriages.	Deaths.
Counties showing an increase	8	21	31
“ a decrease	32	18	9
“ an equality.....	1

It is thus seen that the decreases are spread over the counties of the Province generally and are not specially localized, and have to do with births alone. The total reduction is, however, notable, as seen in the following table :

—	Births.	Marriages.	Deaths.	Total.
1883.....	D = 554	I = 615	I = 230	I = 291
1889.....	I = 1049	I = 191	I = 220	I = 1460
1890.....	I = 1585	I = 329	D = 405	I = 1509
1891.....	D = 319	D = 274	D = 2455	D = 5748
1892..	D = 2578	I = 293	I = 1562	D = 723

NOTE.—D=Decrease. I=Increase.

Births.

That for three years past the births have gone on steadily decreasing is a fact which this year's returns leave no room for doubt. The decline has been referred to in the report for 1891 and repeated for 1892, and would seem indicative of the operation of some general cause. By reference to Table 2 it will be seen that the decrease for cities is 971. As the city population amounts to nearly 1-5 of the total population of the Province it is apparent that the decrease is notably greater in urban municipalities than for the Province as a whole. Thus:

	1891.	1892.
In cities	D = 971	D = 840
In rest of Province	D = 2048	D = 1738

The decrease may probably be further localized by reference to the rates for the individual cities of the Province. Thus in individual cities as seen in Table 2:

Of 12 Cities.....	{ Increase in 4 cities = 45
	{ Decrease in 8 cities = 885

Further reference to the Table shows that of the total decrease 727 occurred in Toronto and Hamilton. This is notable, for while the population of these cities is more than half that of all the cities in the Province, yet the decrease represents nearly 4-5 of the total decrease in cities. The conclusion seems inevitable that the operation of the law affecting marriages, referred to in English reports as the barometer which indicates commercial prosperity or its reverse, must affect the birth-rate probably to the degree indicated in the above figures.

Sex.—By reference to Table 10, the birth-rate according to sex illustrates the same law of the increase of male over female births, as seen in previous reports.

In 1890 the ratio was	Female = 1000 ;	Male = 1057
In 1891 “	“ 1000 ;	“ = 1061
In 1892 “	“ = 1000 ;	“ = 1063

In the report for 1891 the following remark was made when referring to an opinion expressed by an English authority that the great excess of male over female births was a peculiarity of Celtic areas in Great Britain, that “it would appear probable that the occupations of large sections of the populations of any country is a still more important determining cause. Whenever large populations of men are engaged in outdoor pursuits as agriculture, mining etc., their vigor will naturally exceed that where many are engaged in the confining or relatively unhealthy occupations of manufacturing industries.”

The obvious correctness of this conclusion seems to be borne out in the statistics for the cities of Ontario (Table 2). In four out of eleven cities in the list, the female births actually exceed the males, while for the whole the ratio is of females 1000 to 1028 males for 1891, less than half of the ratio for the whole Province, and 1037 in 1892.

Months.—The quarterly and monthly relationships with regard to the number of births is practically the same as set forth in the report for 1891. The causes which then and antecedent thereto have been operative are seen to continue in the returns for 1892. The relationships between the months in which the greatest number of marriages occur and the greatest number of births is shown by reference to the Tables 11 and 12.

Illegitimate Births.—The total number of illegitimate births recorded in 1892 is 525 and 112 less than in 1891. While, as mentioned in other reports, there is a likelihood of this class of births not being in all cases registered, yet as these reasons will always be the same, the falling off is noteworthy. This falling off is not limited to this year, as seen by the following table :

	Total.	
Illegitimate births, 1890.....	978	Or 19.7 per 1,000 births.
Illegitimate births, 1891.....	637	Or 14.3 per 1,000 births.
Illegitimate births, 1892.....	525	Or 12.4 per 1,000 births.

Remembering the English rate of 42 per 1,000 in 1891 as being the lowest yet recorded there, the moral status of Ontario may be said to be most satisfactory.

Marriages.

The total number of marriages, as seen by reference to Table 13, registered in Ontario in 1892 was 14,482, or 28,964 persons. This shows a slight absolute increase over 1891 of 293, but is the same relative ratio if the increase in population for the year be considered. A reference to the table of marriages during the past ten years shows that the rate for Ontario remains very uniform, 1892 varying from the average by only 0.2, the average per 1,000 being 6.9. The following table of the marriage-rates in different countries and neighboring States is of interest :

Country.	Persons per 1,000.	Country.	Persons per 1,000.
United Kingdom.....	15.6	Netherlands.....	14.2
England.....	14.6	France.....	15.0
Scotland.....	13.9	Italy.....	15.0
Ireland.....	9.2	Ontario.....	13.4
Denmark.....	13.6	Connecticut.....	15.8
Norway.....	13.2	Rhode Island.....	18.4
Austria.....	14.4	Massachusetts.....	18.6
Switzerland.....	15.3	New Hampshire.....	19.2
German Empire.....	16.1		

Number of Divorces in Various States.

	Total.	Rate.
Divorces in Connecticut, 1890.....	477	Or 1 in 13.1 marriages.
Divorces in Rhode Island, 1890.....	244	Or 1 in 13.1 “
“ “ “ 1869-1878.....		Or 1 in 10 “
Divorces in Massachusetts, 1890.....	654	Or 1 in 31.9 “
Divorces in New Hampshire, 1890.....	382	Or 1 in 9.4 “
Divorces in Michigan, 1886.....	1,339	Or 1 in 12.4 “

It may be further stated that for the whole United States, while the increase of population between 1870-1880 was 30.1 per cent., the divorces for the same year increased 79.4 per cent; and in Michigan, while population increased 38.2 per cent., divorces increased 107.4 per cent. In all Canada there were 4 divorces in 1891, and 5 in 1892.

It is manifest for reasons attaching to the causes of divorce, that a notable influence is produced thereby upon the marriage-rate. Thus, of the 954 persons divorced in 1890 in Connecticut, 350, or more than one-third of the whole, married again within the year. This means that over 3 per cent. must be subtracted from the marriage-rate in this and other States with similar divorce laws, in order to make a correct comparison between the marriage-rates of these States and Ontario, where the number of divorces granted in 1891-1892 was 9.

It is of interest to notice in this connection the fact that the increased number of marriages per 1,000 is not associated with a proportionately increased birth-rate.

The following table gives the birth-rates in Ontario and several neighboring States for a number of years:

Connecticut.	Ontario.	Massachusetts.
1882.....23.9	1882.....26.2	1882.....24.91
1883.....25.4	1883.....22.3	1883.....25.17
1884.....23.0	1884.....23.1	1884.....25.45
1885.....22.7	1885.....23.5	1885.....25.12
1886.....22.2	1886.....22.0	1886.....25.37
1887.....22.8	1887.....21.7	1887.....25.80
1888.....22.2	1888.....21.8	1888.....25.89
1889.....23.4	1889.....22.6	1889.....26.19
1890.....23.3	1890.....22.0	1890.....25.81
1891.....24.8	1891.....21.1	

Months.—As usual the last quarter of the year leads notably in the number of marriages celebrated, the relation to the other quarters being in much the same proportion as in 1891. Much the same relation exists between the months as in previous years. Exactly the same six months but varying slightly in their order of arrangement, are the lowest in order during the three past years in succession.

Denominations.—Not only does the number of marriages celebrated during the year remain the same even to a decimal, to the number of the population; but the order of marriages by denominations also remains exactly the same. The same permanency in the percentage of marriages celebrated by clergymen of each denomination is seen in a very remarkable degree by comparing the several years set down in the following table. This shows the number of marriages in any denomination compared with the total.

To illustrate the table it may be stated, as for instance in column one, that 1 in every 2.8 of all the persons married were Methodists, and so on through the table.

Denomination.	1883.	1884.	1885.	1890.	1891.	1892.
Methodists.....	2.8	2.6	2.7	2.8	2.8	2.8
Presbyterian.....	5.0	4.9	5.1	5.0	4.9	4.9
Episcopalians.....	5.5	5.8	5.8	6.3	5.9	6.2
Roman Catholics.....	6.8	6.9	6.5	6.8	7.1	6.9
Baptists.....	19.5	20.9	18.3	17.0	18.4	17.6
Lutherans.....	50.3	53.5	50.8	45.1	44.3	42.9
Congregationalists.....	92.9	91.8	114.6	81.9	117.8	91.9
Evangelical Associations.....	160.4	158.8	150.7	111.7	158.5	154.05
Mennonites.....	194.2	182.5	196.8	164.3	183.1	226.2
Quakers.....	1046.7	2077.6	2469.4	546.0	938.6	782.8
Other Denominations.....	87.5	75.8	58.9	41.7	39.9	33.3

Deaths.

Province.—The number of deaths in 1892 as seen by reference to Table 1 is 23,120 as compared with 21,558 in 1891. The rate when the increase of population for the year is calculated, gives an increase of 0.5 per 1000.

By examining Tables 3, 4 and 5 giving a recapitulation of diseases by classes, the following increases are found in the several classes :

	1891.	1892.	I = Increase. D = Decrease.
Zymotic Diseases	3,831	4,670	I = 839
Constitutional Diseases.....	4,788	4,711	D = 47
Local "	7,810	8,211	I = 401
Developmental "	2,983	3,921	I = 938
Violent Deaths	767	845	I = 78
Cause not specified	1,409	762	D = 647
Total	21,558	23,120	

What is most gratifying to notice in the classification, is the greatly improved care of the Division Registrars in insisting upon the specified cause of death being given. The decrease in the number of diseases whose cause is not given is 45 per cent. This decrease is distributed amongst the other classes, thereby increasing to this extent their greater apparent prevalence. Of the increases in the several classes where cause is specified, that in zymotic diseases is made up principally of increased deaths from influenza or *la grippe* in the epidemic of January and February, 1892, amounting in all to 534, and from an explosion of diphtheria in Toronto in the same year. The average in Local diseases is more than made up by the increase in pneumonia of 390 and in bronchitis of 126. Both these increases are naturally associated with, and a result of the epidemic of *la grippe*. The balance of the increase in deaths is found in Developmental diseases, 278 of the 938 increase being under old age. This increase is likewise intimately connected with the epidemic of *la grippe*. The further increase in this class is to be ascribed principally to the placing of still-born and immature births under the heading of pre-natal diseases.

Cities.—The total increase of the Province as already incidentally referred to, was largely due to the increase in cities, this being 595 in the total 1,562, or more than 1 in 3, whereas the city population is to that of the Province less than 1 in 5. By reference to general tables in Appendix the increase is seen to be usually in cities where *la grippe* prevailed most largely. The increase from diphtheria in Toronto has already been mentioned. Altogether the increase in cities over 1891 is 2.17 per 1000 of population. Compared however with various cities in the United States the death-rate is low.

New York, in 1891, had of deaths, per 1000 population.....	25.6
Brooklyn, " " "	23.9
Buffalo, " " "	22.8
Rochester, " " "	18.3
Albany, " " "	23.3
Syracuse, " " "	16.9
Troy, " " "	18.3
Ogdensburg, " " "	18.2
Utica, " " "	22.0

Preventable Diseases.—The diseases placed under this head formerly applied to the eruptive class, but year by year with the advance of scientific knowledge the list of so-called communicable diseases becomes enlarged.

While the term may be still applied to bacterial diseases, the study of climate, occupation and environment generally, shows that the term may be applied to almost all diseases. For instance in a study of Manchester, *Life Tables* by Dr. John Tatham, he has shown that the mortality in that centre of manufactures, is notably greater than the general rate, in other words, that the following two factors have been operative: (*a*) persons of particular unsound health born in the township (of Manchester), of parents whose vitality was already impaired by their occupations and surroundings; and (*b*) persons of originally sounder health who have migrated from outlying districts to older parts of the city. Thus for every 100 males who at the average rate should survive at 5, 15 and 25 years respectively, Manchester township shows numbers decreasing from 85 to 81; at 45 years the survivors have dropped to 64 per cent., and at 65 only 34 males and 42 females survive where the average would be 100. It may be assumed that but for the influence of the second class above mentioned, those who at 65 would at the average rate be surviving would have been wholly wiped out.

It is manifest, therefore, that many diseases induced under such conditions should be considered as distinctly preventable. Applying the term, however, to the class of zymotic diseases in these tables, it has already been pointed out that the increase in 1892 over 1891 was principally due to influenza.

The following table gives the totals for the more important diseases in the class as compared with 1891:

	Whole Province.				New York State.	
	1891.	Rate per 1,000 pop.	1892.	Rate per 1,000 pop.	1892.	Rate per 1,000 pop.
Diphtheria	952	.5	890	0.4	5,970	0.84
Typhoid	744	.4	445	0.2	1,699	0.28
Influenza	393	.2	927	0.4	12,000	2.70
Scarlatina	216	.1	240	0.1	2,228	0.32
Measles	79	.03	117	0.05	1,346	0.20
Whooping cough	102	.04	145	0.07	880	0.13
Tuberculosis	2,379	1.1	2,592	1.1	13,400	2.27

TABLE giving Total Deaths in Cities of Ontario, 1892, from Zymotic Diseases, with Rates per 1,000 compared with 1891.

Apart from the increase in influenza over the whole Province, the most notable point in these tables is the varying number of cases of some one or other special disease in different cities.

For instance, Toronto had less than half the typhoid in 1892 that there was in 1891, but the increase in diphtheria in 1892 was almost one-third the number of cases in 1891. Toronto, in 1892, shows twice as many deaths from scarlatina as in 1891, while the deaths from the same in Ottawa average but one-third those of the former year. Guelph again shows an extraordinary prevalence of diphtheria in both years, and one death in each year from typhoid. St. Catharines shows in 1892 an enormous increase and prevalence of phthisis; while Ottawa, in 1892, shows an unusually large number of deaths from measles. Kingston in both years has an abnormally high death-rate from typhoid; while Brantford, high in typhoid in 1891, had only one case in 1892.

These differences serve to illustrate three points:

1st. That certain zymotic diseases, such as typhoid and tuberculosis, tend, owing to local conditions in some cities and to infection in the latter, to become more or less endemic.

2nd. That certain others are especially marked by sudden epidemic explosions, due evidently to common centres of dissemination, as schools, factories, etc.

3rd. That both are readily lessened by removing sources of infection, whether by improving public water or by closing and disinfecting schools.

In Table 8 are shown the ten highest causes of deaths in 1892 as compared with those in 1891. These constitute 49.1 per cent. of the total deaths, while in 1891 they constituted 51.2 per cent. of the whole. The table from the standpoint of Preventive medicine is full of interest. It contains in both years the same diseases excepting two, one of which typhoid appears prominent in 1891, but recedes and its place is taken by *la grippe* and its adjunct, bronchitis in 1892.

Of the total ten diseases it is at once seen that at least five of these stand in the category of well recognized microbic diseases, and are therefore distinctly preventable, and that these have produced the larger percentage of deaths. In a notable degree accidents should be classed amongst the preventable causes of death, and are principally found to be due to machinery. Valvular disease as a cause of death, while the expression of localized disease of the heart, is in a notable degree a disease of old age. Over fifty per cent. of all the deaths ascribed to heart disease in Toronto, occur at sixty years or over and seventy per cent. at fifty years or over, or for the whole Province seventy per cent. are over fifty years of age.

The percentage of deaths from pneumonia and bronchitis similarly indicates their place as important factors in the deaths from old age:

TABLE giving percentage of deaths from Pneumonia and Bronchitis in persons over fifty years, compared with total deaths for each.

Comparing the total deaths from these two diseases in cities with those for the whole Province, it is found that while the population of the cities stands to that of the Province in the ratio, roughly, of 1 to 5, yet the ratio of pneumonia in the cities to that in the whole province is as 1 to 3.5, and that for bronchitis as 1 to 2.7.

COMPLETENESS OF RETURNS IN ONTARIO.

The twenty-four years since the Act for the registration of births, marriages and deaths went into force have seen most notable changes in the physical features of many parts of Ontario, and still more in the sociological development of her municipalities. In 1871, while the population of Ontario was 1,618,245, that of the towns was 164,937.

In other words while the same cities to-day have a population of 387,607, or 18% of the total for the whole province, they had, in 1871, but 10% of the whole.

Further, in only a few towns was there any street lighting in the modern sense. Public water supplies, even in Toronto, were almost unknown; sewers, where existing, were of the crudest kind, while one has only to read local notices of the times to show how many details of municipal affairs now existing were then practically unknown. Local boards and medical officers of health were only emergency appointments, while spring cleaning, even in cities, was very partially enforced. Smallpox was treated in the general hospitals, while isolation of the eruptive diseases, and still less disinfection, were measures as yet not appreciated or executed.

Registration of anything more than deeds had then hardly begun in the counties, until 1859, when an Act was passed requiring clergymen to register all marriages celebrated by them with the county registrars of deeds. This Act was made applicable in the same year to the new re-arrangement of counties for municipal, juridical and other purposes. Thus began legal vital registration in Ontario, but of marriages only. Remembering that the Registration Act in England was passed only in 1837, and that it found much opposition in various quarters from the clergy, it may be said that progress in this direction in Upper Canada was begun early. The formal instructions for enforcing this registration of marriages was as follows:

SECTION 5, CAP. 72, 1859, CONSOLIDATED STATUTES OF UPPER CANADA.

"Every clergyman or minister shall, immediately after he has solemnized a marriage, enter in a book to be kept by him for the purpose, a true record of the marriage; and shall, on or before the first day of February in every year, return a certified list of all marriages by him solemnized during the year ending on the thirty-first day of December next preceding, to the registrar of the county in which the marriages have taken place, and shall, at the time of making the return, pay or transmit to the registrar one dollar as his fee thereon.

Sec. 7. On receipt by the registrar of any such list, he shall file the same among the papers of his office, and record the same in a book, to be kept by him for the purpose; and in case of the death or absence of the witnesses to a marriage, such register, or a certified copy, shall be sufficient evidence of the marriage, and the registrar shall give a certified copy of a marriage record to any person demanding the same, on payment of fifty cents.

Sec. 12. Every clergyman, minister, clerk, secretary, or other person, who, in any year, refuses or neglects to return the certified list required of him by this Act, on or before the first day of February, shall forfeit for every day's delay, after that day, the sum of four dollars, which sum shall be recoverable, with costs, before any magistrate of the county in which the person resides, and shall be applied according to law.

Sec. 13. The Clerk of the Peace of every county shall, at the expense of the county, from time to time on demand, furnish all clergymen or ministers and others in the county required by the Act to make returns, with the books to be kept, and with printed blank forms for the lists to be returned; and such books shall have columns and headings printed on each page, according to the form given in the sixth section, and the books and forms shall be of such size and form as to admit of the necessary entries being conveniently made therein.

The method adopted for registering marriages is thus seen to be one by which county registrars were required to keep the original certificates and to make indexes of each marriage so returned. The Government had no direct relation with, or control of, those returns.

When the Registration Act of 1868-1869, extending its operations to the registration of births and deaths as well, was passed, provision was therein made by Mr. Pardee (the late Hon. T. B. Pardee), then a private member of the House, who introduced the Bill, whereby the Provincial Secretary became the Registrar-General of the Province. The Clerks of the Peace of each county were made District Registrars, and they were required to transmit books and forms, prepared and supplied by the Registrar-General, to the several Division Registrars, or Municipal Clerks, who, in turn, were to make the returns to the District Registrars who again forwarded them to the Registrar-General. The Division Registrar was required, under Sec. 8, Cap. 30 of the Act to register the particulars of any birth returned, and receive therefor ten cents from parent or informant. Similarly for every death registered, the clerk received ten cents, and for every marriage reported by a clergyman as being celebrated by him, the clergyman was to pay ten cents to the Division Registrar, collecting the same at the time of marriage in addition to the marriage fee.

Under this Act the work of Provincial registration began in 1869 and has continued ever since. Slight amendments to the Act were made in 1869.

Under the Act of 1869, Cap. 23, Sec. 8, the municipality was to pay the Division Registrar, in addition to the above fees, "whatever the municipality deemed just."

No further change took place in the Act until 1875, when the Acts of 1868 and 1869 were repealed, and their place supplied by the amended Act. Under it the District Registrars disappeared (except so far as the term now applies to Registrars of the Unorganized Districts), and the Division Registrars were brought into direct relations with the Registrar-General. The latter supplies them with forms, receives from them returns, and issues certificates to them on which they are entitled to receive payment for returns from the municipality. Such are the terms of the Act, which has practically remained unchanged since 1875.

I have referred to the growth of the work of Vital Statistics because it illustrates two interesting points: first, the recognition that the growth and permanency of social institutions in Ontario required some method by which the legal aspects of marriages and the rights of birth would in the future be placed on an established basis, and further, that a means would be supplied by which all who wished could from statistics observe the actual growth of populations, whether native or foreign, and of the social influences determining the results in each instance; and, second, that by it is illustrated the evolution, seen in other parts of our municipal government, as when the populations in 1832, then divided into a few judicial districts, was by the Act of 1859 sub-divided into counties, 42 in all, whose courts, registry offices, and all similar county functions, such as that of the registration of marriages, as seen in the Act quoted, were administered by county officials.

The growth of population, and of the further sub-division of municipal duties by increased powers to townships, villages and towns marks itself in legislation, such as appears in the amended Act of 1875 above referred to.

The following table of the volume of business done in the Registrar-General's branch in 1871-3 and 1892-3 illustrates at once the economy in the expenditure of funds, in the close supervision of returns, and in the availability of the records for the uses of all persons interested therein, whether resident within or outside the Province under the present Act.

STATEMENT showing the Expenditures and Volume of Business in the Registrar General's Department during several years.

Total.....				8,894
Preparing special statement of deaths, as per Act of 1893, in the following cities during year 1892 of persons 21 years and over for correcting voters' list, viz.—				Toronto. Brantford. London. Kingston. Belleville. Windsor.
Examining death returns from Counties of Prince Ed- ward, Lincoln and Welland and tabulating deaths from consumption by families for special report.				9,000
Issue of special blanks for entering and recording re- turns of births, marriages and deaths for past years, extending from 1849 to 1890.....			200	210

While the present Act has several manifest advantages, it has in practice several positive disadvantages, viewed from the standpoint of correct returns which were absent even from the early Marriage Act of 1859 and the Act of 1868-9.

In the clauses quoted it will have been seen that the clergyman who celebrated a marriage paid a small fee of one dollar per year to the Registrar, intended for the expense connected with indexing the marriages in the County Registry Office. In the Act of 1869 provision was likewise made for the payment of ten cents by the party who obtained the advantages of registration, the Municipal Council adding thereafter to the clerk's salary such further sum as might be deemed proper, to pay him for his labor in making returns to the District Registrar. The amount paid for such work was fixed by Order in Council. It appears that County Clerks of the Peace who were District Registrars were paid in the several years of the existence of the Act of 1869 out of Provincial funds the following amounts :

1870	\$3,808 63	1873	\$3,933 42
1871	3,842 62	1874	3,973 62
1872	3,917 19	1875	3,881 99

Or a total of \$23,417.47 in 6 years.

While these several ways of having the labor of collecting returns paid for seem in some degree somewhat more cumbrous than the present method, it at any rate placed Division Registrars performing the work in a better position than they are at present. Then they were entitled to ten cents for each registration—as much as they can legally get now, and more than many actually do get, since it is a common practice for municipalities to commute the payment of ten cents for each registration by paying the Division Registrar an annual salary for doing all the work which may fall upon him as municipal clerk. The result in practice is, as many of the answers made to the Inspector show, that the Division Registrars will not make any serious attempt to get complete returns, as they say they are paid no more for all their pains whether the number be 100 or only 10.

While in practice there is no doubt that the amendment of the Act introduced in 1875, by which the Registrar-General was brought into direct relationship with the Division Registrar, has been a distinct saving of Provincial funds, by a withdrawal of the fees from the Clerks of the Peace appointed District Registrars under the Act of 1869, yet it has, by fixing the remuneration of the Division Registrars, or municipal clerks, at 10 cents, without providing that they shall be assured of getting this amount, distinctly lessened the efficiency of the method of obtaining complete returns. Some such clause as that "Division Registrars shall be entitled to receive, over and above any amount paid them for salary as municipal clerk; and they are hereby prevented from commuting the same by receiving any stated salary to cover all their duties, except in cities of over 25,000 inhabitants," would seem to supply, at any rate, a partial remedy. Twenty years' experience since 1875 in the working of the present Act has been sufficient proof that the whole question of payment in proportion to work done of Division Registrars must be reconsidered if any notable improvement in returns is to be expected. Until such takes place, it seems idle to have provisions for punishing Division Registrars for neglect to perform their duties, and as unreasonable to expect them to punish householders who neglect to make returns of births and deaths. The defects of registration dependent on this are, I believe, fully illustrated in the returns for cities.

For instance, it does not seem at all likely in three cities similar in many ways as are St. Thomas, Stratford, and St. Catharines, that the average marriage-rate for ten years has stood as 12.7 : 8.1 : 8.4. Further, it does not seem probable that in Kingston and Belleville, cities close together, the average birth-rates should stand for the same ten years as 25.4 : 18.7.

Again, when a death-rate, which can be obtained fairly accurate from the caretakers of cemeteries, shows for ten years, as in St. Catharines, 18.0 per 1,000, with a birth-rate extending over ten years averaging less than the death-rate, can it be conceived that birth returns are in any degree accurate?

To illustrate the fact of such omissions it may be stated that the number of registrations recorded during the years 1892 and 1893 for previous years and registered as provided under the Act by special permission in each case by the Registrar-General was, of births, 359, marriages, 16, and deaths, 8, or a total of 383, distributed as follows :

Births.		Marriages.		Deaths.	
1891.....	13	1874.....	2	1891.....	2
1890.....	33	1873.....	3	1890.....	2
1889.....	78	1871.....	1	1889.....	1
1888.....	53	1870.....	2	1888.....	1
1887.....	40	1869.....	3	1887.....	1
1886.....	16	1868.....	1	1886.....	1
1885.....	24	1867.....	1	1885.....	1
1884.....	15	1866.....	2	1884.....	1
1883.....	16	1864.....	3	1883.....	1
1882.....	8	1861.....	1	1882.....	1
1881.....	10	1859.....	2	1881.....	1
1880.....	7	1858.....	2	1880.....	1
1879.....	3	1857.....	1		
1878.....	4	1856.....	2		
1877.....	3	1855.....	1		
1876.....	3	1849.....	1		
1815.....	2				

By a comparison and close study of the diagrams following this report it becomes apparent that some immediate alterations in the methods by which improved local returns can be insured are demanded.

In addition to increasing the remuneration, as suggested in the last annual report, to 25 cents for each complete birth and for each complete death return, and retaining marriage returns at 10 cents, there should be provision whereby the clerk shall be assured of such compensation, and then, if thereafter it can be shown that he is neglecting his duties in obtaining complete returns, power should exist in the Act whereby the Registrar-General can require the municipal council to appoint another person as Division Registrar.

As will be seen in the summary of work appended hereto done by the Inspector, Col. R. B. Hamilton, the difficulties experienced by Division Registrars in 1893 are very much the same as those set forth in his report of 1892.

TORONTO, January 2, 1894.

*To the Honorable Richard Harcourt,
Registrar-General of Ontario.*

SIR,—I have the honor to report that during the past year I visited for the purposes of inspection the Division Registrars of 112 municipalities within the following counties, viz :

Brant, Bruce, Carleton, Grey, Halton, Huron, Kent, Lambton, Leeds and Grenville, Lincoln, Middlesex, Northumberland and Durham, Ontario, Peel, Perth, Peterborough, Prescott and Russell, Renfrew, Simcoe, Stormont, Dundas and Glengarry, Welland, Wellington.

I find the difficulties attendant upon the carrying out of the Act respecting the Registration of Births, Marriages and Deaths are about identical in all the counties throughout the Province, and have therefore scarcely anything to add to my report of last year.

The recommendations made in that report are pretty thoroughly endorsed by the Division Registrars visited during the past season, and I would again strongly recommend for your consideration the suggestions therein contained.

I have much pleasure in stating that a steady improvement in the clerical work of the half yearly returns of the Division Registrars is manifest, as is evidenced by the fact that two years ago I had to send 265 returns back for correction ; eighteen months ago I sent back 180 ; twelve months ago 143 were returned ; while six months ago I only found it necessary to send back 86.

The Division Registrars throughout the Province are, with very few exceptions, extremely anxious to make their returns as complete as possible, and I have no doubt whatever but that with a few necessary changes in the Act a great improvement will soon be made manifest in both the quality and quantity of vital statistics.

I have the honor to be, Sir, your obedient servant,

R. B. HAMILTON,
Inspector of Vital Statistics.

Trusting that it may be found practicable to have amendments to the Act similar to those drawn up in the Bill prepared for your consideration in 1892 made law during the coming year.

I have the honor to be your obedient servant,

P. H. BRYCE, M.A., M.D.,
Deputy Registrar General.
